Treatment

---

Many individuals in the United States have been diagnosed with hypothyroidism and take thyroid hormone to treat this condition. Most individuals do very well on traditional levothyroxine (T4). However, some individuals do not feel well despite taking levothyroxine to restore their thyroid hormone levels.

## HEAR FROM PATIENTS WITH HYPOTHYROIDISM

Please join the American Thyroid Association (ATA)<sup>®</sup> for a discussion between two patients and their physician Dr. Elizabeth McAninch to hear first-hand about the experiences of patients as they journey through their treatment for hypothyroidism.

---
