

AbbVie is pleased to introduce the **SYNTHROID DELIVERS PROGRAM**, a direct-to-patient pharmacy program that offers patients a cash-pay option to receive Synthroid consistently and conveniently.

When patients and Health Care Providers decide that Synthroid is the right treatment option for them, the *Synthroid Delivers Program* is a pharmacy service that partners with patients to ensure they always get the brand-name medication their doctor prescribed. The program provides consistent pricing for Synthroid for just \$25 a month with a 90-day prescription (additional pricing is available for 30-day and 60-day prescriptions). In addition, patients get free 2-day home delivery with their first prescription upon enrollment as well as resources such as refill reminders, disease state education, and access to a pharmacy team.

Patients can experience a seamless enrollment process with the Synthroid Delivers Program when they receive a text directly to their mobile phone. Once enrolled, they are able to manage their prescription from any device (mobile, tablet, or desktop). Health Care Providers can also provide more information about enrolling in the *Synthroid Delivers Program*.

AbbVie continues to be committed to our patients. For more information, please visit SynthroidDeliversProgram.com.
